In this report, we update our Asia Technology team's investment strategy, focus areas, and recommended stocks for the second half of 2026. In 1H26, AI server/DC-related hardware stocks were key drivers of share prices, and the scope of stock picking expanded to areas such as electronic components and electronic materials. Heading into 2H26, meanwhile, we present several stock strategies amid the highly volatile environment, such as stock selection for risk-on markets and defensive plays for risk-off markets. Our three key messages are as follows:

(1) Maintaining a fundamentally bullish view on Asia AI server/DC-related (hardware) stocks: We expect demand to continue to outpace supply and high value-added technology to continue to outweigh cost-reducing trends. We believe the current AI-driven cycle remains large and long. Although related stocks have seen profit-taking entering July, we view this as a healthy adjustment following the rapid share price surge.

(2) Criteria for selecting AI server/DC-related stocks: We consider the following two criteria for stock selection in risk-on markets.

- **Sub-segments:** Compared to previous expectations, we expect extended tightness in major sub-segments like memory. Additionally, tight supply/demand expanded to peripheral areas like niche electronic components (such as MLCCs) and electronic materials in 1H26, and could extend out to silicon wafers and analog/power semiconductors (excluding China) in 2H26. Shin-Estu Chemical and SUMCO are key players in silicon wafers, alongside Renesas Electronics and Rohm in analog/power semiconductors.
- **Stock selection criteria:** (1) Significant benefits from higher prices/ASPs, (2) the ability to unlock capacity constraints through timely investments, (3) valuations lagging despite future profit contributions from AI, and (4) idiosyncratic drivers not priced into consensus. On July 6, we upgraded Nittobo to Buy from Neutral, driven by prolonged supply/demand tightness of T-Glass and its positive impact on pricing/ASP (LINK). We evaluate other stocks such as Panasonic, Sumitomo Electric Industries, Lasertec, and Ebara, based on their individual risk-return profiles.

(3) Defensive plays during risk-off periods: We consider stocks that are conversely

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

starting to grasp new business opportunities through AI disruption. For example, the threat of AI is beginning to generate new demand for software/system construction, such as cyber solutions. Examples of stocks poised to benefit from generative AI include NRI, Baycurrent, NEC, Fujitsu, and Recruit.

Based on these perspectives, our Asia Technology team highlights 37 recommended stocks.

Exhibit 1: Our Asia Technology team highlights 37 recommended stocks

2H26: Three key messages and stock recommendations

In this report, we update our investment strategy, focus areas, and stock recommendations across the Asia technology team coverage for 2H26.

In our January 12 report, Asia Tech Outlook & Resurgent Japan - Seizing the Global Growth Opportunity: A broader and deeper AI presence in the Asian supply chain, we highlighted five themes we believe are under the market's radar in the AI space:

- Extensive business opportunities driven by soaring power consumption
- Extensive business opportunities driven by faster large-scale data transmission
- Tightening supply/demand for niche components/materials
- Acceleration of physical AI
- AI disruption

While these five focus areas remain unchanged, given the significant share price fluctuations YTD we now present three perspectives for 2H26 and update our stock recommendations.

Three perspectives into 2H26

1. We remain bullish on fundamentals/share prices in the Asia AI supply chain (hardware). The two bottom-up trends we monitor for AI server/data center (DC) applications driving the cycle—namely (1) signs of semiconductor/component device supply exceeding demand, and (2) signs of a shift toward lower cost trends over higher value-added technology (i.e., a slowdown in technological evolution)—have yet to materialize. Furthermore, beyond server (infrastructure) investment, the continued penetration of edge devices such as physical AI and edge AI could serve as the next driver. While share prices in the Asia AI supply chain (hardware) have risen significantly YTD, we maintain an overall bullish stance for 2H26, as we believe the **AI cycle is still large and long.**

2. Selecting AI stocks not only requires assessing expansion into sub-segments; well-regarded names require a closer examination of their individual risk-returns. Compared to previous expectations, we expect extended tightness in major sub-segments like memory. In addition, valuations of niche electronic components (such as MLCCs) and electronic materials rose in 1H 2026, and we see potential for **supply/demand tightening to spill over into silicon wafers and analog/power semiconductors (excluding China) in 2H26.** Shin-Etsu Chemical and SUMCO are key players in silicon wafers, alongside Renesas Electronics and Rohm in analog/power semiconductors.

Meanwhile, for sub-segments/companies where supply/demand is already tight (and share price valuations have advanced), we think assessing the risk-return of individual companies becomes even more crucial. Factors for analysis include: (1) significant benefits from higher prices/ASPs, (2) the ability to unlock capacity constraints through timely investments, (3) valuations lagging despite future profit contributions from AI, and (4) idiosyncratic drivers not priced into consensus. Accordingly, examining individual stock risk-returns, news flows, and timing in greater detail is critical. On July 6, we upgraded Nittobo to Buy from Neutral, driven by prolonged supply/demand tightness of

T-Glass and its positive impact on pricing/ASP (LINK). We evaluate other stocks such as Panasonic, Sumitomo Electric Industries, Lasertec, and Ebara, based on their individual risk-return profiles.

3. As a safety net in the event of a risk-off market, **investors should consider stocks that are conversely starting to seize new business opportunities through AI disruption**, by which we mean not only the varying degree of disruption, but also the threat of AI beginning to generate new demand for software/system construction, such as cyber solutions. Such stocks may be oversold and could attract attention as investment candidates if the main AI hardware names were to face a risk-off phase for any reason. Examples of stocks poised to benefit from generative AI include NRI, Baycurrent, NEC, Fujitsu, and Recruit.

Stock selection update - highlighting 37 stocks

The recommended stocks of the Asia technology team, selected from these perspectives, are as follows.

Exhibit 2: Stock Highlights

Company Name	Ticker	Rating	Analyst	Currency	Current Price	Target Price	Upside	FY27 P/E	FY28 P/E

Maintaining an overall bullish stance on the Asia AI supply chain (hardware) in 2H26

In our June 8 report (Japan Electronic Components/Semiconductors: Potential onset of one of the largest cycles in history), we highlighted the possibility that the sector is entering one of its largest cycles ever, driven by AI impacts. We also argued that we are likely currently in the early stages of this cycle.

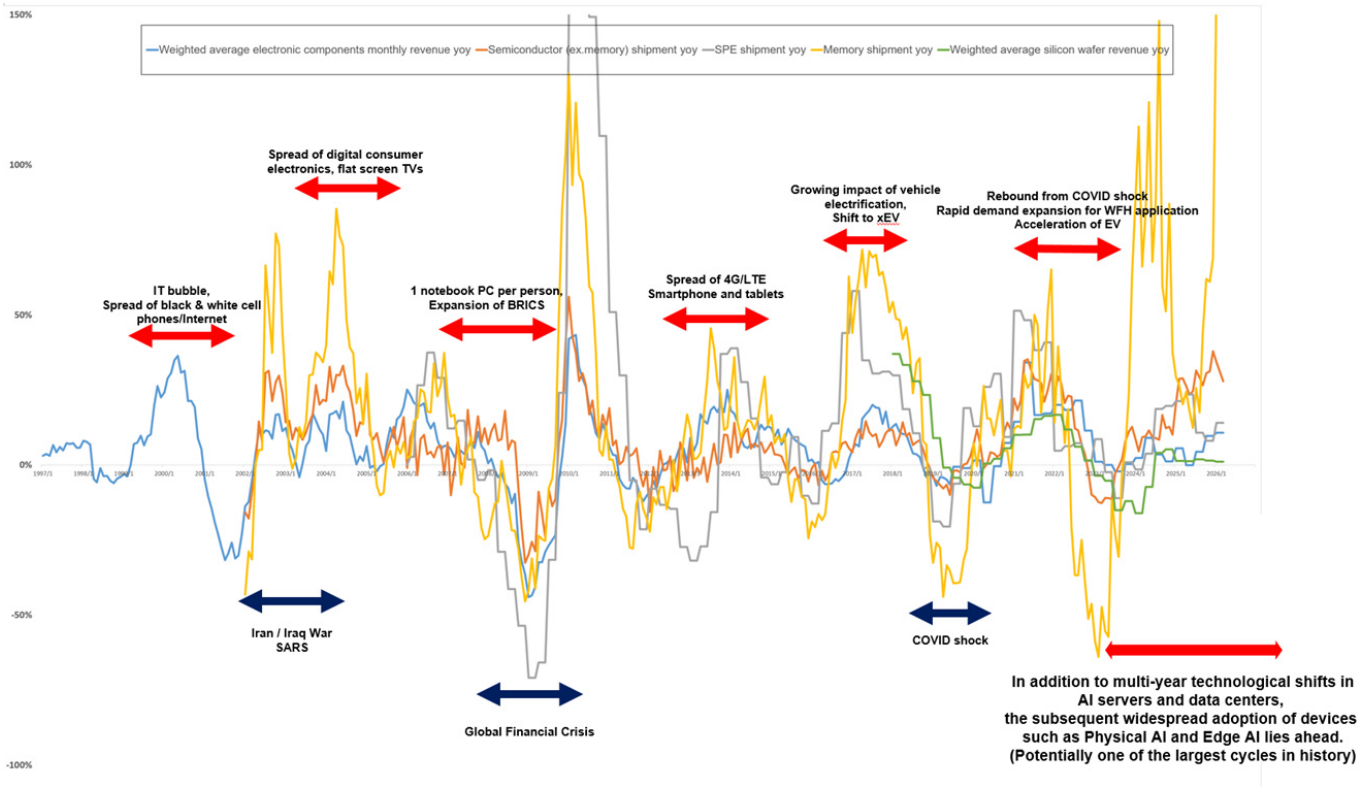

The timing with which investors have begun to price the cycle into share valuations in the Japan electronic components/semiconductors sector has arrived about three years later than for the main Asia AI hardware sectors such as foundries, memory, and SPE (hence our use of "early stages"). However, **even in the leading sectors, we see absolutely no sign of a peaking-out at present. Rather, over the past six months, our analysts covering Asia technology (hardware) have become increasingly bullish on the outlook**.

To detect a cycle peak-out, we will monitor for the following two phenomena, which have yet to emerge:

1. Signs of semiconductor/component device supply exceeding demand: currently we see no such signs (rather, our view is that an increasing number of segments are experiencing stronger supply/demand tightness and a continued favorable pricing environment)
2. Signs of a shift toward lower-cost trends from higher value-added technology (i.e., a slowdown in technological evolution): currently we see no such signs (rather, our view is that the pace of technological evolution remains significant and the trend toward higher value-add will continue for some time)

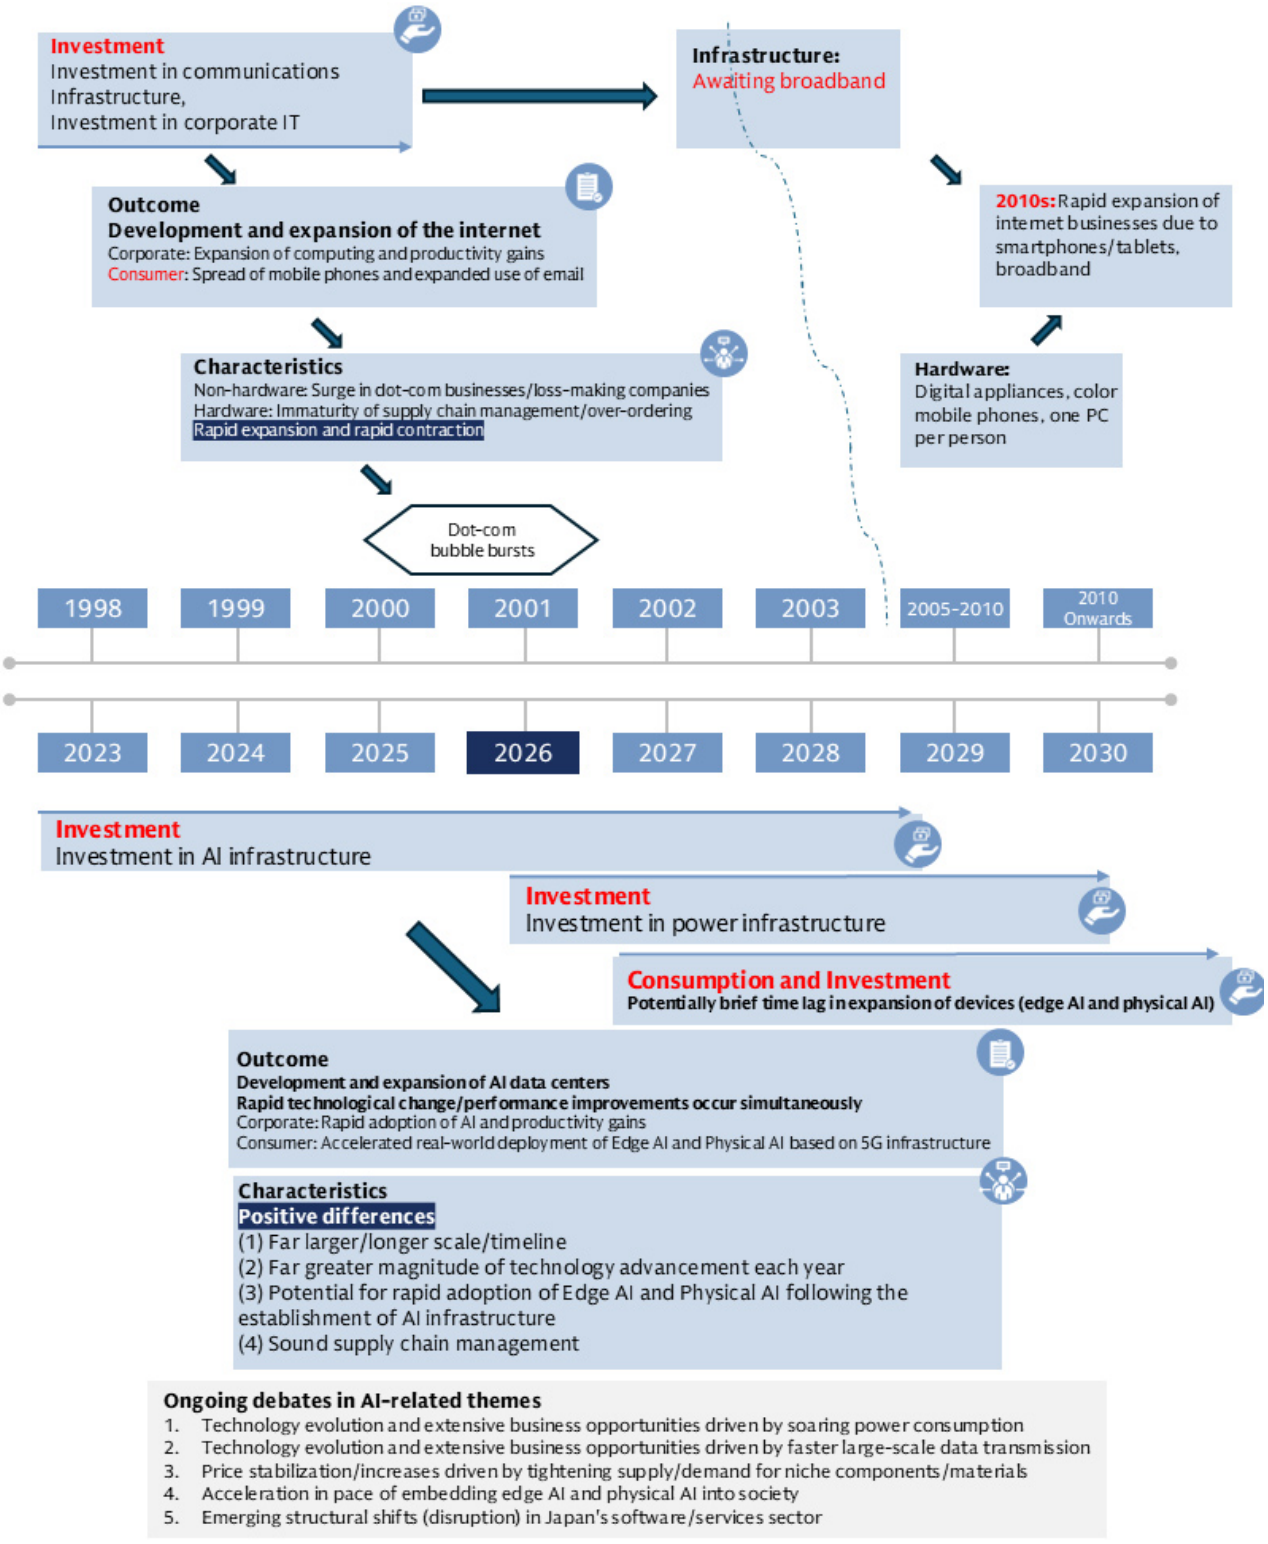

Furthermore, as also noted in our June 8 report, we think it is highly likely that after the demand growth/technological evolution for AI servers, the penetration of edge devices such as physical AI and edge AI will continue as the next driver of hardware demand. **The possibility that this cycle will be one of the biggest and longest ever, combined with the lack of any signs of a peak-out, underpins our continued overall bullish stance on the Asia AI supply chain (hardware) for 2H26.**

Exhibit 3: Comparison with past cycles (1):
In the AI cycle, semiconductors (memory), semiconductors (logic), and SPE lead, followed by electronic components, with silicon wafers recovering/expanding with a lag. We expect the AI cycle to be large and long

Source: Datastream, World Semiconductor Trade Statistics, SEMI, SEAJ, Company data, Goldman Sachs Global Investment Research

Exhibit 4: Comparison with past cycles (2): Differences between the dot-com bubble and subsequent technology cycle
This time, infrastructure development itself is likely to continue at scale for a long time, and the time lag to edge device penetration may be short

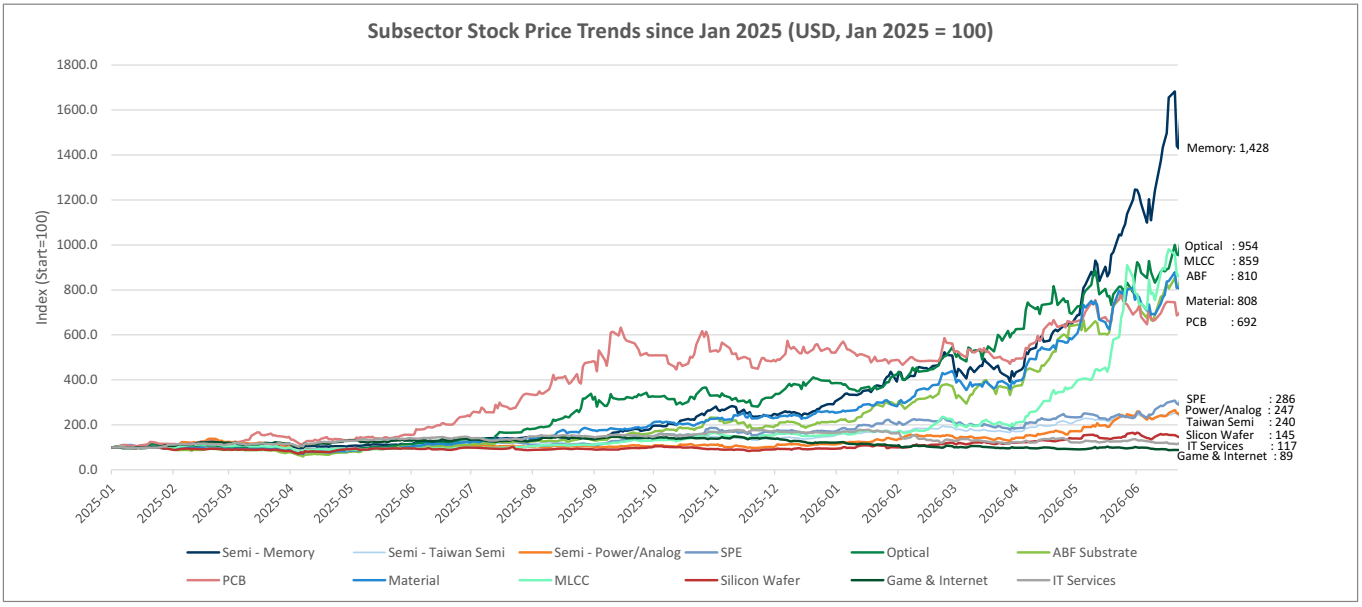

Source: Goldman Sachs Global Investment Research

Preferences for Asia AI hardware-related stocks heading into 2H26

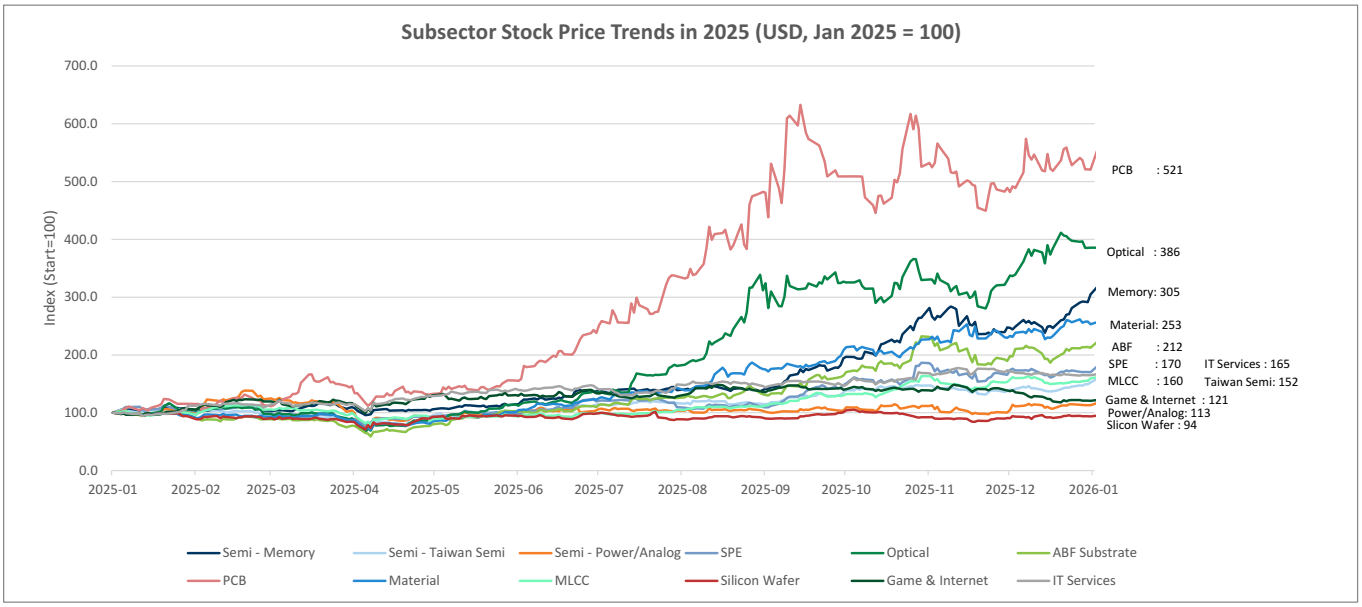

Exhibit 5, Exhibit 6, and Exhibit 7 show the stock price performance of major subsegments cumulatively since 2025, annually for 2025, and YTD in 2026. Looking back at the sequence of events, investor attention first gathered on the core subsectors within the Asia AI supply chain **(Taiwan semiconductors, memory, SPE)**, triggered by NVDA's earnings in mid-2023. **Then, in 2025, the stock rally spread to PCBs, optoelectronics, ABF substrates and electronic materials, extending into electronic components such as MLCCs as we entered 2026.**

Exhibit 5: Stock price performance of major subsegments (cumulative, from Jan 2025 to 2026 YTD)
Calculated using the market-cap weighted average of target stocks. In USD terms, Jan 2025 = 100

This trend aligns with the sequence in which the impact of supply/demand tightening spreads to peripheral devices, against the backdrop of increased demand for AI servers/DCs and higher content value due to technological change.

According to the supply/demand heat map in Exhibit 9 updated by our analysts, **we expect conditions in the main sub-sectors to remain extremely tight (or, in areas like memory, to see an extended period of tightness compared with previous expectations). In addition, valuations of niche electronic components (such as MLCCs) and electronic materials rose in 1H 2026, and we see potential for supply/demand tightening to spill over into silicon wafers and analog/power semiconductors (excluding China) in 2H26.**

Exhibit 9: Supply/demand heat map and price trends for major sub-segments/products (expanded items, updated with our latest views as of June)
Tight conditions in memory, T-glass, etc. to be more prolonged versus previous expectations. Tightening could spread to analog/power semiconductors (excluding China) and silicon wafers going forward

Component/Material		Price Change				Supply/Demand Balance							
		2026		2027		2026				2027			
		Like-for-Like	ASP (Incl. Mix)	Like-for-Like	ASP (Incl. Mix)	1Q	2Q	3Q	4Q	1Q	2Q	3Q	4Q

Exhibit 10: Changes in supply/demand heat map
Updated in Jan and Apr 2026 - further tightening of conditions and improvement in pricing environment

Red boxes indicate main updates since the previous version.

Source: Goldman Sachs Global Investment Research

Meanwhile, in 2H26, we believe assessing the risk-return of individual companies will be even more crucial for sub-segments where supply/demand is already very tight (and share price valuations have advanced). From this perspective, it will be key to examine individual stock risk-return profiles based on factors including:

1. significant benefits from higher prices/ASPs,
2. the ability to unlock capacity constraints through timely investments,
3. valuations lagging despite future profit contributions from AI,
4. idiosyncratic drivers not priced into consensus.

In this update, we present two exhibits as reference for identifying the third factor listed above. Exhibit 11 shows the relationship between our outlook for AI server/DC-related sales weightings (based on our FY28 estimates) and stock price performance from 2025 to June 2026. Unsurprisingly, the chart shows that a higher sales exposure to AI servers/DCs correlates with stronger stock price performance (the abnormally high stock performance for companies with exposures of 50% and above is driven by the inclusion of Korean and Japanese memory stocks, which benefited most from price increases).

Exhibit 12 shows the correlation between individual companies' AI server/DC-related sales weightings and their P/E ratios based on our FY28 estimates. Although this correlation focuses solely on Japanese companies, which investors value using relatively uniform metrics, a basic positive correlation is clearly evident.

Identifying stocks positioned below the trendline may serve as a useful guide for finding market laggards. These include the analog/power semiconductor maker Renesas and silicon wafer maker SUMCO noted above.

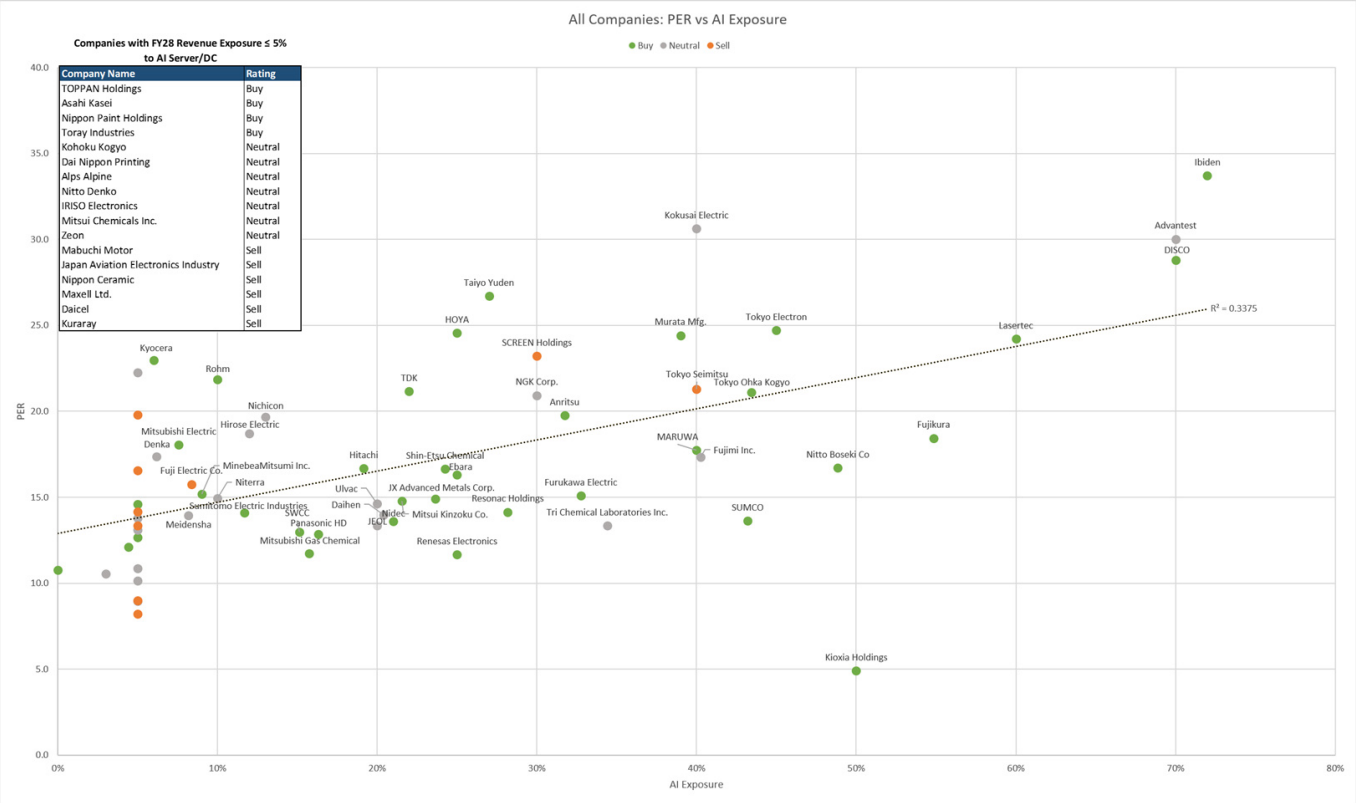

On the other hand, **we do not believe that being positioned above the trendline necessarily means a stock is overvalued.** Each stock must be examined individually and in detail, as this group may include stocks with high long-term growth visibility, leading blue-chip stocks within the sector, stocks with further significant pricing/ASP upside (point 1 above), and companies capable of unlocking future potential through capacity expansion (point 2 above).

Exhibit 11: Relationship between FY28E AI server/DC sales weighting and stock price performance

AI Server/ Data Center Exposure	# of Companies	Total Market Cap ($ mn)	Stock Price Change since Jan '25
>50%	47	4,723,609	877.6%
40-49%	10	305,180	244.6%
20-39%	40	3,163,981	217.7%
10-19%	23	701,088	156.8%
10%>	71	851,698	155.5%

Source: Company data, Goldman Sachs Global Investment Research, LSEG Data & Analytics

Exhibit 12: Relationship between FY28E AI server/DC-related sales weightings and P/E based on our FY28 estimates: Positive correlation. Stocks below the trendline a useful guide in finding laggards. Stocks above the trendline include many blue-chip stocks with high long-term visibility, and this does not necessarily signal they are overvalued

Nidec data is based on our FY27 estimates as we have not introduced FY28 estimates. Pricing as of close on July 6th, 2026.

Source: Goldman Sachs Global Investment Research, LSEG Data & Analytics

Based on these perspectives, our analysts have updated their stock selections for 2H26. Please see our stock preferences within each individual analyst's coverage below.

Recommended stocks for 2H26

Japan Electronic Components/Semiconductors (Daiki Takayama)

Stock preferences: For **Murata Mfg. (Buy, on CL)** and **Taiyo Yuden (Buy)**, we focus on the positive ASP impact (mix improvement) from AI server/DC-related MLCCs as well as the MLCC book-to-bill ratio in the near term. Regarding price hikes, while **Yageo (Buy, covered by Chao Wang)**, whose mainstay is commodity MLCCs, is likely to push for them in 2H26, we think late 2026 to early 2027—when annual price negotiations for automotive applications and the 2027 outlook become clearer—will be an important period to gauge the feasibility of price hikes for Japanese makers as well. Meanwhile, for **Ibiden (Buy)**, we focus on management decisions regarding additional capacity expansion (new plants). We expect positive news flows regarding pricing and capacity expansion to raise medium-to-long-term earnings expectations going forward, and think the company will solidify its core positioning.

We also believe there is growing scope for price increases in some analog and power semiconductors from tightening supply/demand heading into 2H26. We are increasing our focus on **Renesas Electronics (Buy)**, given its low valuation and position as potential

beneficiary of pricing, and **Rohm (Buy)**, as we think that when excluding the value of its stake in Toshiba, the AI-related contribution (including SiC) to the company's standalone earnings is underappreciated. Looking further ahead, we also increase our focus on companies like **MinebeaMitsumi (Buy)**, which benefits from demand for AI/DC bearings and humanoid robots, and lags in terms of valuation.

Japan Electronic Materials (Atsushi Ikeda)

Stock preferences: We remain constructive on the silicon wafer sector, supported by robust volume growth, largely in 300mm wafers, driven by broad-based AI server demand and our outlook for meaningful price increases in the next round of LTAs. Among our preferred names, **SUMCO**, as a pure-play wafer supplier, is well positioned to benefit from rising demand for leading-edge logic applications and a more substantive round of price revisions expected from late 2027 to 2028, which should drive significant earnings growth. For **Shin-Etsu Chemical**, too, there is good visibility on medium- to long-term earnings expansion, supported by higher volumes and improved pricing in advanced memory applications, growth in leading-edge lithography materials such as photomask blanks, photoresists, and multilayer materials, and the full-scale ramp-up of product lines for AI servers including quartz cloth and optical fiber preforms.

We expect supply-demand conditions to remain tight across several key materials, including Low-CTE glass and ultra-thin copper foil for semiconductor packaging substrate CCLs, as well as Low-Dk glass and VSP copper foil for AI server motherboards. Reflecting our positive outlook for both near- and medium-term earnings, we reiterate our Buy rating on **Mitsui Kinzoku** and recently upgraded **Nitto Boseki** (**Nittobo)** to Buy. Key catalysts are likely to be announcements of capacity expansion projects and associated price increases in VSP copper foil for Mitsui Kinzoku and in T-glass for Nittobo. We also expect **Resonac** to meaningfully outperform full-year guidance as early as 2Q, supported by strong earnings across a broad range of semiconductor back-end materials, including CCL, NCF, TIM, and DFR. Finally, we reiterate our Buy rating on **JX Advanced Metals**. In addition to growth in semiconductor sputtering targets, magnetic-material targets, titanium copper products, and high-purity tantalum powder for tantalum capacitors, we see InP substrates as a compelling medium- to long-term growth driver following the company's announcement of an approximately tenfold capacity expansion.

Japan SPE/Memory (Shuhei Nakamura)

Stock preferences: While the overall equipment market remains buoyant on the back of expanding AI semiconductor demand, from the perspective of individual stocks, we focus on two points: (1) whether a company can achieve sales growth above the sector average on factors including technological change, proprietary technologies, and market share gains, and (2) whether top-line strength leads to a significant improvement in profit margins. From this standpoint, in the SPE sector, we maintain our Buy ratings on **Lasertec** (expanding adoption of ACTIS at wafer fabs), **Ebara** (expanding application of CMP processes and market share gains), **DISCO** (multiple growth drivers, centered on advanced packaging), and **Tokyo Electron** (a product portfolio generating WFE-plus growth and initiatives to improve profit margins).

In the NAND market, while NAND demand for AI inference servers continues to expand, major memory makers are maintaining their priority on DRAM investment, so we expect

prolonged tightness in the supply/demand balance. Against this backdrop, we upgraded **Kioxia Holdings to Buy** on May 31. We maintain our view that the NAND market is inherently a cyclical market, but we believe higher profit levels are sustainable compared with past cycles, and therefore still see further upside for the share price and multiples (even after the significant share price rally YTD).

Japan Industrial Electronics (Ryo Harada)

Stock preferences: First, we select stocks from the perspective of growing profit exposure to AI-related products and valuations, highlighting **Panasonic HD** and **Sumitomo Electric**. For Panasonic Holdings, the proportion of profits from AI/DC-related products, including BBUs for generative AI data centers where it holds around an 80% global market share, is expected to expand from 27% in FY25 to 47% in FY28. Meanwhile, the company's FY2E P/E (LSEG basis) is 22X, making it undervalued for an AI stock in our view. Similarly, Sumitomo Electric looks set to see its proportion of profits from AI/DC-related products expand from 15% in FY25 to 42% in FY28, driven by expanded sales of optical fiber cables, increased production of optical connectors, and contributions from optical devices and InP substrates with high marginal profit ratios, and it also looks undervalued at an FY2E P/E of 23X. As earnings results ahead confirm a rising proportion of AI/DC-related profits, we expect the stock to trade at a higher multiple. Next, in optical products where supply/demand is tight, we maintain our bullish view on **Fujikura**, which has ample scope to invest in capacity expansion. Global supply/demand for optical fiber cables is tight, but Fujikura has already announced large-scale capital investments in Japan and the US, and has the strong financial base with which to support them. In order to retain flexibility in its capital investments, the company's policy is to avoid relying on subsidies that would impose restrictions on its investments.

Heading into the second half of the year, we believe the spotlight could gradually shift to stocks related to **800V DC power supply** systems. Thus far, power equipment such as transformers has garnered attention from the perspective of supplying power to data centers (outside the data center), but at present, rapid technological changes are occurring inside the data center, and a shift to direct current and higher voltages is being considered to accommodate the increased power consumption of computing chips while suppressing the increase in current. Under this new architecture, products such as SSTs (Solid State Transformers) and rectifiers are gaining importance, and companies such as **Mitsubishi Electric**, **Hitachi**, and **Fuji Electric** could benefit. If plans for these architectures firm up in the second half of the year, this will likely become a key investment theme.

Korea Technology (Giuni Lee)

Stock preferences: We expect 2027 S/D for conventional DRAM, NAND, and HBM to be all tighter than 2026 and the tightness to extend into 2028, being the most severe memory shortage in history due to strong AI/server demand and limited supply growth. We believe tight industry S/D should help the memory companies to see an elevated level of earnings power for at least the next few years. Under increasing visibility of prolonged shortage, customers are actively asking for LTA, which includes a high level of binding commitments and guarantees sustainable margin. We expect an expansion of LTAs to enhance demand visibility for memory suppliers, leading them to make more

efficient capex plans and lower the oversupply risk that we have seen in the past. We expect **Samsung Electronics (SEC)** to be one of the key beneficiaries of conventional memory shortage, given its outsized exposure in this segment relative to peers. Adding the significant improvement in its HBM business that we expect from this year driven by stronger demand from ASIC customers and increased market share within Nvidia, we estimate 2026E OP will grow more than 8X yoy to reach over W370tn, and a historically high ROE of 52%. With this record profit and FCF generation, we also expect a material upside to the company's shareholder return as well.

In addition, we highlight **Samsung Electro-Mechanics (SEMCO)** as we expect the AI tailwinds to help the company to fire on all its cylinders, especially highlighting: 1) strong MLCC business from AI servers and auto, 2) new growth driver in silicon capacitors, and 3) significant growth in ABF substrates driven by favorable S/D and AI customer expansion. For MLCC, we expect AI server MLCC demand to remain strong due to solid AI server units growth and increase in MLCC content per server to accommodate higher power consumption. However on the supply side, only a few companies can manufacture AI server MLCC and as MLCC industry is already seeing 90+% UTR, we expect favorable S/D condition to benefit SEMCO. We expect SEMCO's AI server MLCC to see strong growth and as AI server MLCC is sold at double-digit times higher than standard MLCC with much higher margin, we expect increasing mix of AI server to drive MLCC ASP and margin higher. Regarding ABF substrate, we also expect the S/D outlook to be favorable for at least the next few years as AI server demand remains strong and larger design and higher layer count for AI substrate is tightening the supply. With industry-wide UTR reaching full level but limited capacity additions available in the near-to-mid term, we expect S/D to remain favorable and benefit SEMCO. We expect SEMCO ABF revenue to see strong growth and margin to also see meaningful improvement with higher server mix.

Taiwan Semiconductors (Evelyn Yu, James Schneider)

Stock preferences: AI continues to anchor our positive view on leading-edge foundry heading into 2027E and beyond, remaining the primary engine behind both advanced-node and advanced packaging demand. For **TSMC (2330.TW)**, we look for another year of solid growth in 2026E with revenue (in USD terms) up 39% YoY on top of an already strong 2025 (36% YoY), underpinned by fully loaded N3/N5 utilization on resilient AI demand and ongoing productivity gains, a strong N2 revenue ramp, and robust advanced-packaging pull. Looking into 2027E, we expect TSMC to accelerate its N3 capacity expansion into 2027E – with N3 capacity reaching 200kwpm by end-2027E, as N3 is the key bottleneck for AI/HPC applications, reinforcing our conviction in a multi-year growth runway.

Away from foundry, we see a select group of covered AI names spanning ASIC, advanced packaging and testing as well placed for strong 2026E growth, as rising AI chip volumes, larger package sizes, longer test times, higher TDP, and wider SLT adoption all play to their strengths. Our preferred Buy-rated exposures are **1) MediaTek (2454.TW)**, our key AI ASIC play, where an accelerating AI ASIC ramp with much stronger shipments should drive a sharper earnings inflection into 2027E. We expect MediaTek's AI ASIC revenue to reach US$2/20.25/52.5bn in 2026-28E, accounting for 9%/49%/70% of revenue, **2) Hon Precision (7769.TW)**, the dominant FT handler provider, which is set to benefit from growing handler/ATC demand with rising chip volumes and lengthening test times,

3) MPI (6223.TWO), where we expect strong AI ASIC probe card momentum into 2027E, with further upside from its emerging CPO test equipment opportunity, **4) WinWay (6515.TW)**, where robust CPU test socket demand – driven by agentic AI – adds to an accelerating structural TAM expansion that extends its growth visibility into 2030, and **5) Aspeed**, for which we see a structurally stronger growth trajectory into 2028 driven by agentic AI demand, stronger AI ASIC momentum with market share gain, and accelerating penetration of the higher-ASP AST2700 generation.

Taiwan Electronic Components (Chao Wang)

Stock preferences: The CCL sector continues to benefit from ongoing CCL spec upgrades, while CCL supply remains structurally constrained (given >1 year expansion lead time). In terms of individual stocks, we focus on two factors: (1) pricing conditions of CCL, with CCL price hike expected to continue accelerating in 2H26, supporting GM/OPM, and (2) product mix shift towards the higher end, with M9 CCL expected to enter MP in 2H26, led by Nvidia being the first to adopt and followed by ASIC customers. From this perspective, we maintain our Buy rating for **EMC** (M9 CCL will contribute at least low single digits % of total revenue in 2026) and **TUC** (high-end product mix should continue to go up in 2H26 driven by ASIC customers).

In addition, we believe the overall ABF substrate industry has entered a solid pricing upcycle, **NYPCB (Buy, on CL)** will not only enjoy a solid pricing uptrend but also an increasing exposure to the high ASP/margin high end AI projects. For power, we expect AI PSU BOM cost per watt to increase for next gen AI server with higher power density (43% higher BOM per watt from 5.5kW PSU to 12kW PSU), and the adoption of power rack (+-400V / 800V) from late 2026 will also benefit **Delta (Buy).**

Taiwan Downstream Supply Chain (Allen Chang, Verena Jeng)

Stock preferences: We are positive on Taiwan AI server supply chain, supported by rising AI server racks: 55k/ 105k/ 163k in 2026-28E and growing ASIC adoption, with ASICs accounting for 50%/ 52%/ 55% of AI chips in 2026-28E. We expect the ongoing AI infrastructure cycle to support supply chain companies' growth through 2028E: US leading CSPs in aggregate capex is expected to grow at 76% YoY in 2026E (vs. 74% YoY in 2025) (Global Server TAM report link).

Among AI servers ODMs, **we remain positive on Buy rated Hon Hai (on CL) / FII** in US Cloud, given their strong R&D, comprehensive offerings (GPU module, baseboard, AI servers, CPU servers, CPO switch, liquid cooling, etc.), and global production sites. We see these strengths continuing to support market share gains amid rapid technology migration (Hon Hai / FII report link). **We are also positive on Wiwynn**'s leading market position in ASIC AI servers and its diversification into GPU AI server racks, supported by strong demand from leading US CSPs across general servers and AI servers (Wiwynn report link).

Mainland China semis supply chain (Allen Chang, Verena Jeng)

Stock preferences: We are positive on the progress made by local memory and advanced logic suppliers in meeting rising demand from local CSP clients in China on generative AI demand; this is positive for China's semis supply chain across foundry, SPE, semi material, components, IP and design. Media reported that (Link) memory supplier

CXMT has signed a multi-year supply agreement with Tencent on server DRAM chips, and the reported value is worth more than Rmb20bn (China SPE report link).

We remain constructive on NAURA as the leading local SPE supplier offering comprehensive products while expanding into new categories and advanced node applications. With the accelerated adoption of local GPU chipsets in AI foundation models (e.g. BABA Qwen3.6-35B-A3B, SenseNova U1, etc.), we are positive on rising client demand for advanced node applications, benefiting local SPE suppliers including NAURA due to their strong R&D capabilities. **We are constructive on Hua Hong**'s growth trajectory and margin improvement ahead, supported by growing semiconductor demand for AI applications and devices. Hua Hong continues to ramp the final capacities of its second 12 inch fab, and we expect construction of the company's new 12 inch fab to start soon, supporting rising client demand. (Hua Hong report link)

Could stocks perceived negatively by investors due to AI disruption fears become good investment candidates during a risk-off phase?

Here we introduce our views on companies that we feel have been perceived negatively by the equity market relative to their underlying capabilities, including those for which AI disruption is now conversely starting to open up new business opportunities. These stocks could gain attention as investment candidates if major AI hardware stocks were to face a risk-off phase for any reason.

While the degree of AI disruption varies across tech subsectors, on the flipside it is important to highlight that threats from advanced AI are starting to unearth new demand for software/system construction, including in cybersecurity applications.

Japan IT services sector (Chikai Tanaka)

While concerns over AI disruption linger, we are starting to see signs of recovery in the US in investor sentiment and US software stock indices, spurred by strong earnings from Snowflake and comments from Capgemini during its IR Day. Stock prices in the Japan IT services sector remain soft, likely facing headwinds from sector rotation. However, in light of the difference in customer in-sourcing rates between the Japanese and US markets, the view is spreading that major Japanese system integrators are less likely to be disrupted by AI. In recent discussions with investors, our impression is that excessive concerns over AI disruption are gradually receding. Headwinds from sector rotation could continue, but based on strong fundamentals, we watch closely for the timing of a stock price reversal. Following Accenture's earnings (June 18; see report), share prices across the entire sector fell the next day, and investor sentiment worsened further. However, the company's sluggish earnings were primarily driven by client investment restraint due to the situation in the Middle East, which has little impact on the demand environment for IT services in Japan, and we believe stocks are now looking even more undervalued. From the following two perspectives, we recommend **NEC, Fujitsu, Nomura Research Institute, and BayCurrent** as Buy-rated stocks with the potential to benefit from the spread of generative AI.

AI-related business

In the short term, trends in AI-related business sales will likely gain attention as a catalyst for the IT services sector. The market consensus is that the spread of generative AI is a headwind for the IT services demand environment, but similar to the on-premise vs. cloud transition, generative AI is also creating new IT services demand. We believe that if this becomes visible in companies' earnings results, it will serve as a positive catalyst, increasing the possibility of a share price reversal for groups of stocks that benefit from AI.

According to NRI and Baycurrent (major consulting firms), AI-related business is beginning to take off as corporate appetite for AI investment grows. Inquiries are mainly strong for consulting/SI demand in the AI implementation support space, construction of AI data infrastructure, and security measures. In particular, there is a strong need for AI data infrastructure currently, with projects on the scale of several billions of yen beginning to increase depending on the project. Also, while the sales scale for consulting is still small, demand is rising rapidly, including for security solutions. In our view, this is

likely to lead to demand for revamping aging systems, from the perspective of linking them to AI and strengthening security (accelerating the modernization trend).

With the emergence of frontier AI models, significant security issues are coming to light, but similar to DX, a vertically integrated model of consulting followed by system development is likely to be effective in AI transformation (AX) as well. When companies make full-scale AI investments, the decision-making authority lies with management rather than the IT department. Thus, NRI, which has deep ties with customers' C-suite executives through its consulting business, is more likely to be able to win over customers than its competitors, in our view, and we consider it to be in an advantageous position. Baycurrent, as a pure-play consulting firm, should also benefit most from the expansion of consulting demand for AI implementation support and security solutions. Similar to NRI, NEC and Fujitsu operate across all areas, including consulting, SI, network construction, and security, so they could also see expanded demand for AI-related business.

AI-driven development

The next catalyst to watch is profitability improvement through AI. As a measure to improve profitability, companies have indicated plans to focus on AI-driven development, which applies generative AI to system development, testing, and other functions. NEC, Fujitsu, and NRI have all entered into business alliances with Anthropic and expressed their intention to utilize its AI tool (Claude Code) for AI-driven development. At present, Fujitsu and Hitachi are leading the way in AI-driven development efforts, and this is already having a positive impact on their company-wide profits. Going forward, we expect NRI, which is proceeding with the full-scale roll-out of its proprietary AI-driven development platform, and NEC, which is advancing the internal use of Claude Code, to start to see AI-driven development benefits emerge.

NEC sees operational efficiency improvements via generative AI (including AI-driven development) as the biggest driver of profitability improvement in its IT services business. Fujitsu expects its gross margin to continue improving by +2 pp or more per year from FY25 through FY35, driven by the full-scale roll-out of AI-driven development and personnel optimization. We believe both companies will see a significant profit uplift from expansion in the scope of AI-driven development, given the large scale of their IT services businesses. NRI's medium-term plan also assumes a profit increase of c.¥15 bn over the next three years from operational efficiency improvements, including AI-driven development. According to the company, development automation by AI agents is progressing ahead of its expectations, boosting the possibility of further benefits.

Exhibit 13: Initiatives at Fujitsu and Hitachi are leading the way; NRI and NEC are also moving toward full-scale deployment
AI-driven development initiatives

SIer	AI-Driven Development Initiatives	Financial Impact
NEC	Full-scale adoption of AI-driven development centered on US-based AI tools; one of the key drivers for improving BluStellar profitability (Non-GAAP OPM: 14.5% in FY26/3 → 25% in FY31/3)	Financial impact expected to gradually materialize from 2027 onward; in addition to cost reduction, the company anticipates revenue growth effects through redeployment of surplus personnel
Fujitsu	Applied across all SI processes, primarily in modernization projects; current generative AI project application rate is approximately 70%, with plans to raise it above 90% at an early stage	The profit improvement effect of several billion yen (mid-to-high range) is materializing in FY2026 (ending March 2026). The company believes its initiatives are more advanced than those of its peers, and expects further expansion from FY2027 (ending March 2027) onward.
NRI	General-purpose AI development tool project application rate to reach 100% by FY29/3; proprietary AI-driven development platform to be fully deployed from FY27/3, targeting 100% application rate by FY31/3	The company projects a cumulative profit improvement effect of approximately ¥15 billion from FY2027 through FY2029 (ending March 2027–2029), with potential additional upside of ¥15–20 billion depending on the utilization of AI agents.
NTT Data	From FY3/27 onward, generative AI will be applied across all phases of SI (Systems Integration) processes (utilizing AI agents)	The company aims to achieve a +40% improvement in productivity by FY3/28 compared to the end of FY3/26
Hitachi (DSS)	Generative AI already applied in manufacturing/unit testing; policy to apply generative AI across all SI processes by FY28/3	Approximately ¥5 billion in cost reduction effects as of FY25/3; targeting 30% productivity improvement + ¥100 billion in application effects by FY28/3

For reference, we have included AI-driven development initiatives in the Digital System & Service business (IT services business) at Hitachi (covered by our Japan industrial electronics analyst, Ryo Harada).

Source: Company data, Goldman Sachs Global Investment Research

Japan game & internet sector (Minami Munakata)

Regarding the impact of generative AI on Japan's game & internet sector, we get the impression that objective scrutiny is progressing away from one-sided discussions of AI disruption. We are starting to see a gradation of effects: (1) Generative AI has a positive impact: **Recruit Holdings (Buy)**; (2) Limited negative impact from generative AI from a creative perspective, with potential benefits in terms of production efficiency: Game sector; (3) Generative AI could have a negative impact and requires close monitoring: Internet advertising space and ad agencies. We believe we are entering a phase of further stock differentiation. **We highlight Recruit Holdings, Capcom, and Sony Group as Buy-rated beneficiaries**.

Internet sector

Compared with the entertainment sector, the impact of generative AI on Japan's

internet sector is becoming event in the underlying business environment and earnings in a shorter timespan, and both positives and negatives have come into sharper focus. Representative of the positive side is Recruit Holdings' Indeed business. The use of AI to enable rapid and advanced matching of companies and job seekers (expanded use of Premium Sponsored Jobs and more advanced screening) is driving monetization, resulting in higher US ARPJ (US Average Revenue Per Job posting: up +25% yoy in 4Q3/26, and we estimate +21% yoy in FY3/27). Recognition of Indeed being well-placed to benefit from AI is spreading in the equity market, and we expect Recruit Holdings to continue to be preferred within the sector.

At the same time, LY Corp (Not Rated) could be susceptible to negative impacts from generative AI. While the company is actively utilizing generative AI, including the introduction of an AI agent named Agent i, it could face direct competition from generative AI in the search domain. Indeed, its daily unique browser count (quarterly average) declined by -3.5% yoy in 4Q3/26. In addition, ad placement on generative AI platforms is starting gradually in various countries, and ad placement on ChatGPT was recently launched in Japan as well. Three companies—CyberAgent, Dentsu, and Hakuhodo—are serving as agencies for this ad placement, and for ad agencies, we believe now is a time where their ability to adapt business models to the generative AI era will be tested.

Game sector

Investor concerns that generative AI will impair content scarcity and creative value have largely receded, in our view. Rather, the positive aspects of generative AI are becoming evident. These include SIE (Sony Interactive Entertainment) utilizing its internally developed AI tool Mockingbird (which automatically generates high-quality 3D facial animations from performance capture data) to achieve operational efficiencies in the creation of Horizon Zero Dawn Remastered, and Sony Group seeking out potential in utilizing AI for monetization, such as in payment processing fraud detection and user data analysis in its PlayStation Store.

Meanwhile, ongoing capital inflows into AI-related stocks—amid further outflows from Japan's game & internet sector—remain a headwind for supply/demand. Under such conditions, we think stocks with strong earnings momentum which have undergone some adjustment in valuation look attractive. Among platformers, we highlight **Sony Group** (Buy; we estimate FY3/27 OP growth of +14% yoy, while FY3/27E P/E of 16.8X is near the bottom of its 5-year range). Among publishers, we highlight **Capcom** (Buy; we estimate FY3/27 OP growth of +16% yoy, while FY3/27E P/E has fallen back in line with the sector average at 21.3X despite the company's commitment to double-digit (%) OP growth each year).

Appendix: Changes in weightings of sales and profits from AI servers/DCs over FY25 to FY28E

Exhibit 14: Changes in sales/profit weightings from AI servers/DCs over FY25 to FY28E

Changes in Revenues and Operating Profit for AI/DC (Based on GSe)

Analyst	Ticker	Company Name	% of AI/DC Related Revenues FY25	% of AI/DC Related Revenues FY28	% of AI/DC related OP FY25	% of AI/DC related OP FY28

Price Target Risks and Methodologies

Exhibit 15: Risks

Company Name	Ticker	Rating	Analyst Name	Risks
Murata Mfg.	6981.T	Buy*	Daiki Takayama	A decline in smartphone production volume, deterioration in MLCC supply/demand, and yen appreciation.
Taiyo Yuden	6976.T	Buy	Daiki Takayama	Weaker-than-expected smartphone demand, deterioration in MLCC supply/demand, and yen appreciation.
Ibiden	4062.T	Buy	Daiki Takayama	Road map changes of main customers, weaker PC and server demand, and a reduction in diesel vehicle sales
Renesas Electronics	6723.T	Buy	Daiki Takayama	A slowdown or delayed recovery in consumer electronics-related demand, stagnant automobile production, protracted reduction in semiconductor inventories, delayed recovery for industrial equipment applications, and yen appreciation
Rohm	6963.T	Buy	Daiki Takayama	Further increases in precious metal prices, delays in business portfolio transformation, uncertainty surrounding thereorganization and integration schemes, fluctuations in the market valuation of Toshiba shares.
SUMCO	3436.T	Buy	Atsushi Ikeda	Key risks: A slowdown in semiconductor demand, yen appreciation, and a greater-than-expected increase in depreciation and other fixed costs.
Mitsui Kinzoku Co.	5706.T	Buy	Atsushi Ikeda	Key risks include slowdown in AI server demand, yen appreciation, and decline in prices for zinc and other metals.
Nitto Boseki Co	3110.T	Buy	Atsushi Ikeda	Key risks include fluctuations in semiconductor demand, currency volatility, and changes in the competitive landscape for specialty glass.
Resonac Holdings	4004.T	Buy	Atsushi Ikeda	Key risks include a slowdown in semiconductor demand, yen appreciation, and decline in graphite electrode earnings.
Lasertec	6920.T	Buy*	Shuhei Nakamura	(-) Decline in market share due to new entrants (-) Lack of progress in ACTIS adoption by wafer fabs (-) Weaker customer investment appetite for leading-edge process nodes (-) Rapid appreciation of the yen against the US dollar
Ebara	6361.T	Buy	Shuhei Nakamura	(-) Semiconductor capex enters a downcycle (-) Increasing competitiveness of Chinese CMP system makers (-) Slow adoption of new technology in semiconductor devices (-) Decline in crude oil/LNG prices, oil refining/petrochemical margins
Kioxia Holdings	285A.T	Buy	Shuhei Nakamura	(-) A slowdown in AI investment centered on hyperscalers (-) Rise of NAND players in China (-) Decline in profit margins due to cost increases or fluctuations in capacity utilization (-) A sharp appreciation of the yen against the US dollar
Panasonic HD	6752.T	Buy	Ryo Harada	**Companywide:** (1) Weaker-than-expected progress with fixed-cost reductions or insufficiently realized benefits from business reforms across the company as a whole, (2) weaker growth prospects due to the loss of key personnel during the fixed-cost reduction process, (3) slower-than-expected progress in revamping the business portfolio as a result of delays selecting buyers, (4) additional investment and depreciation burdens arising due to increased demand for cylindrical batteries, and (5) forex trends (we estimate that every ¥1 appreciation vs. the USD/EUR/CNY impacts annual adjusted operating profits by -¥0.9 bn/-¥1.0 bn/+¥4.7 bn, respectively). **Lifestyle updates business:** Weaker demand for residential/commercial air conditioners due to a downturn in the global economy, or the loss of market share to more popular or cheaper products at competitors. **Panasonic Connect:** (1) A slump in the company's aircraft services business if the "bring your own devices" trend were to become more common for in-flight entertainment on commercial aircraft, (2) weaker-than-expected sales growth at acquired company Blue Yonder (standalone basis), (3) major impairment losses on Blue Yonder if the calculation of its present value were to require a higher WACC due to rising interest rates, softer demand or other factors (indication of impairment is checked every quarter), and (4) a longer-than-anticipated decline in demand for various mounting systems used in process automation, such as the manufacture of PCs and smartphones. **Panasonic Energy:** Tesla opting to increase its use of batteries made by other companies, leading to stronger pricing pressures, a further slowdown in the EV market, or increased competition in the generative AI-related battery backup unit (BBU) business. **Panasonic Industry:** Weaker-than-expected factory automation-related demand, stiffer competition in the generative AI-related hybrid capacitor and circuit board material businesses, or a longer-than-expected downturn in demand for smartphones and other consumer electronics.
Sumitomo Electric Industries	5802.T	Buy	Ryo Harada	**Automotive segment:** Decline in automobile production volume; slower-than-expected pass-through of material procurement costs to selling prices. **Infocommunications segment:** Longer-than-expected inventory adjustments due to a slowdown in hyperscaler capex; catch-up by competitors in ultra-high density optical fiber cables. **Environment & energy segment:** Delays in new and replacement power infrastructure projects due to difficulties in procuring materials and securing workers; slower-than-expected earnings contributions from the Japanese government's clean energy strategy. **Industrial materials and other segments:** Slowdown in demand for cemented carbide tools, etc., due to a macroeconomic slowdown; increase in manufacturing costs for sintered parts, etc., due to rising energy prices. **Company-wide:** FX fluctuations; sustained high material prices.
Fujikura	5803.T	Buy	Ryo Harada	**Telecommunications**: A delay in benefits from hyperscaler investment, a prolonged restraint in telecom carrier investment, and competitors in ultra-high-density optical fiber cables catching up with Fujikura. **Electronics**: A greater-than-expected slowdown in the smartphone market and/or more intense competition. **Automotive products**: Automobile production volume undershooting our assumptions. **Companywide**: Forex swings.
Samsung Electronics	005930.KS	Buy	Giuni Lee	1) major deterioration in memory supply/demand, 2) sharp contraction in smartphone margins, and 3) mobile OLED market share loss.
Samsung Electro-Mechanics	009150.KS	Buy	Giuni Lee	A stronger-than-expected industry MLCC supply increase and weaker-than-expected demand for AI server/auto/smartphones.
TSMC	2330.TW	Buy	Evelyn Yu	(1) further deterioration in end-demand recovery impacting capacity utilization; (2) slower customer node migrations; (3) slowdown in AI investment resulting in lower long-term semiconductor content growth; (4) poor yields/execution resulting in worse-than-expected profitability; (5) stronger competition resulting in ASP/profitability erosion; and (6) unfavorable FX trend or higher-than-expected cost increase weighing on the margin outlook.
MediaTek	2454.TW	Buy	Evelyn Yu	(1) Weaker-than-expected end demand especially with smartphones, (2) Higher foundry cost impacting its margin outlook, (3) Intensifying competition that would result in reduced profitability, and (4) Slower ramp in ASIC would result in changes in operating leverage
Aspeed	5274.TWO	Buy	Evelyn Yu	(1) A softer-than-expected server market demand recovery, (2) slower-than-expected BMC penetration within AI servers, and (3) intensifying market competition.
EMC	2383.TW	Buy	Chao Wang	RCC to replace all high-end smartphone HDI design; rising trade tensions, which could lead to weaker smartphone and server shipments; and rising competition from mainland China peers.
TUC	6274.TWO	Buy	Chao Wang	Slower-than-expected share gains in the low-loss CCL segment; rising trade tensions, which could lead to weaker server and switch shipments globally; and rising competition from mainland China peers.
NYPCB	8046.TW	Buy*	Chao Wang	Slower-than-expected PC demand recovery, slower-than-expected ABF substrates pricing upgrading outlook, and slower-than-expected NYPCB new high-end capacity qualification progress.
Delta Electronics	2308.TW	Buy	Chao Wang	Slower-than-expected AI server power consumption growth momentum, potential market share loss risk in AI server DC-DC power system or the potential design change on AI server DC-DC system, and slower than expected of future products deployment, including power rack, SST and SOFC.
Yageo Corp.	2327.TW	Buy	Chao Wang	Key downside risks: (1) weaker inventory builds from OEMs; (2) softer IT end-demand; and (3) slower-than-expected integration of Kemet/Chilisin/Telemecanique/Shibaura.
Hon Hai	2317.TW	Buy*	Allen Chang	(1) slower-than-expected ramp-up of the AI server business; (2) weaker-than-expected EV total solution performance across EV assembly, design, software, and semis; (3) slower-than-expected ramp-up of capacity globally; and (4) fiercer-than-expected competition in the consumer electronics EMS business.
Wiwynn	6669.TW	Buy	Allen Chang	1) weaker-than-expected AI server demand growth; 2) slower-than-expected recovery in general server demand; and 3) more severe competition in the server ODM market.
NAURA	002371.SZ	Buy	Allen Chang	1) Further US export restrictions on China semiconductor firms, which could delay their capacity expansion schedule and therefore reduce the demand for NAURA's equipment; 2) Slower-than-expected capacity expansion progress at NAURA's matured nodes customers, which could lead to slower revenue growth than we expect and therefore lower earnings vs. our current estimates.
Hua Hong	1347.HK	Buy	Allen Chang	1) Weaker-than-expected end-market demand; 2) Slower-than-expected 12" fab ramp-up; 3) Uncertainties around US-China trade relations.
Foxconn Industrial Internet	601138.SS	Buy	Verena Jeng	(1) Worse-than-expected demand and profit from the AI server business; (2) Worse-than-expected iPhone component business expansion due to strong competition; (3) Slower-than-expected capacity ramp-up in new factories; (4) Lower-than-expected iPhone shipment given FII provides components for iPhone.
NEC	6701.T	Buy	Chikai Tanaka, CFA	Key risks include lower corporate IT investment appetite, weak telecom carrier capex, a shift to overseas products, and the emergence of unprofitable projects.
Fujitsu	6702.T	Buy	Chikai Tanaka, CFA	Key risks include deterioration in IT services/hardware demand due to worsening business sentiment, weaker telecom carrier capex, and the emergence of unprofitable projects.
Nomura Research Institute	4307.T	Buy	Chikai Tanaka, CFA	Key risks include (1) investment cuts at major customers, (2) unexpected slump in overseas demand, and (3) unprofitable projects.
Baycurrent	6532.T	Buy	Chikai Tanaka, CFA	The key downside risks include: (1) a decline in corporate IT investment appetite due to deteriorating economic sentiment, (2) a slowdown in the pace of headcount growth amid intensifying hiring competition, and (3) a decline in utilization rates following the peak-out of specific large clients and large projects.
Recruit Holdings	6098.T	Buy	Minami Munakata	(1) Macro environment: Risks include possible changes in job market momentum due to a sharp deterioration in macro conditions, mainly in the US, and a resulting weaker-than-expected earnings performance in the HR technology business. (2) Indeed monetization: Indeed has introduced numerous measures to increase monetization. Risks include progress with monetization at the platform falling short of our assumptions. (3) Capital allocation: Equity investors appear to largely expect Recruit to continue with share buybacks of a certain size. Risks include shareholder returns falling short of market expectations.
Capcom	9697.T	Buy	Minami Munakata	(1) Pipeline: If the release of major titles is delayed, this could introduce volatility to the annual pipeline and lead to downside risk to new title sales volume. (2) Impairment: If user preferences change, this could lead to the cancellation of content development and/or the booking of large impairment losses due to weak performance of new titles. (3) Erosion of IP Value: If the company excessively focuses on game software pricing strategies, this could lead to a steeper-than-expected decline in unit prices, particularly for old titles, eroding IP value.
Sony Group	6758.T	Buy	Minami Munakata	(1) G&NS business; (i) Lower-than-expected PS5 hardware unit sales; (ii) lower-than-expected revenue per console unit due to delays in the launch of new software, live service games, and downloadable content (DLC) from first and third parties, or weaker-than-expected performance of these offerings; and (iii) deterioration in hardware profitability due to higher promotion expenses or component costs. (2) Pictures business: Slower-than-expected growth in paying subscribers at anime streaming platform Crunchyroll, which we consider a key driver of earnings in this segment, or higher-than-expected promotion and marketing expenses. (3) I&SS business: Slower growth in the market for CMOS image sensors for mobile devices, ASP declines due to intensifying competition (particularly from Chinese companies), or deterioration in product yields due to increasing manufacturing difficulty accompanying performance improvements in CMOS image sensors.

Exhibit 16: Valuation methodologies

Company Name	Ticker	Rating	Analyst Name	Currency	Current Price	Target Price	Upside	Valuation Methodology
Murata Mfg.	6981.T	Buy*	Daiki Takayama	JPY	10,250	12,600	22.9%	Our target price is based on FY3/29E EV/GCI vs. CROCI/WACC, applying +80% premium to our sector average EV/DACF multiple of 10X.
Taiyo Yuden	6976.T	Buy	Daiki Takayama	JPY	18,385	21,200	15.3%	Our target price is based on FY3/29E EV/GCI vs. CROCI/WACC, applying +80% premium to our sector average EV/DACF multiple of 10X.
Ibiden	4062.T	Buy	Daiki Takayama	JPY	21,390	25,500	19.2%	Our target price is based on FY3/29E EV/GCI vs. CROCI/WACC, applying +60% premium to our sector average EV/DACF multiple of 10X.
Renesas Electronics	6723.T	Buy	Daiki Takayama	JPY	4,710	5,400	14.6%	Our target price is based on FY12/28E EV/GCI vs. CROCI/WACC, applying EV/DACF multiple of 13X.
Rohm	6963.T	Buy	Daiki Takayama	JPY	5,782	6,500	12.4%	Our target price is based on FY3/29E EV/GCI vs. CROCI/WACC, applying +20% premium to our sector average EV/DACF multiple of 10X.
SUMCO	3436.T	Buy	Atsushi Ikeda	JPY	5,171	6,140	18.7%	Our target price is based on the FY12/27-FY12/28 average correlation between the materials sector EV/GCI and CROCI/WACC estimate (using a cash return multiple of 0.7X).
Mitsui Kinzoku Co.	5706.T	Buy	Atsushi Ikeda	JPY	37,520	62,600	66.8%	Our target price is based on the correlation between the materials sector's EV/GCI and our FY3/28E CROCI/WACC forecast (cash return multiple of 0.7X plus a 60% premium to the sector average).
Nitto Boseki Co	3110.T	Buy	Atsushi Ikeda	JPY	3,515	4,820	37.1%	Our target price is based on the correlation between the materials sector's EV/GCI and the FY3/28E CROCI/WACC forecast (cash-return multiple of 0.7x plus a 60% premium to the sector average).
Resonac Holdings	4004.T	Buy	Atsushi Ikeda	JPY	16,750	23,920	42.8%	Our target price is based on the correlation between the materials sector's EV/GCI and the FY12/27E CROCI/WACC (cash-return multiple of 0.7X plus a 30% premium to the sector average).
Lasertec	6920.T	Buy*	Shuhei Nakamura	JPY	47,040	67,000	42.4%	Based on the global SPE sector multiple of 18X and the average of our FY6/28E estimates. We then apply a sector-relative premium of 50%.
Ebara	6361.T	Buy	Shuhei Nakamura	JPY	6,223	7,800	25.3%	Based on the correlation between P/B and our FY12/27E ROE estimates.
Kioxia Holdings	285A.T	Buy	Shuhei Nakamura	JPY	81,590	116,000	42.2%	Based on the correlation between P/B and our FY3/27-3/28E ROE estimates.
Panasonic HD	6752.T	Buy	Ryo Harada	JPY	4,557	5,000	9.7%	We apply an EV/EBITDA multiple of 9.0X (FY3/28E base year, based on the historical correlation between EV/EBITDA and EBITDA margin).
Sumitomo Electric Industries	5802.T	Buy	Ryo Harada	JPY	2,593	3,400	31.1%	We apply a target EV/EBITDA multiple of 13.0X (based on FY3/28E, using an SOTP approach).
Fujikura	5803.T	Buy	Ryo Harada	JPY	5,354	7,500	40.1%	We apply an EV/EBITDA multiple of 25.0X (FY3/28E; multiple based on the EV/EBITDA and EBITDA margin correlation across its domestic and global competitors).
Samsung Electronics	005930.KS	Buy	Giuni Lee	KRW	318,000	480,000	50.9%	Our 12m 2026-2027E EV/EBITDA-based SOTP target price for the common share is W480,000. Our 12-month target price for the preference share is W360,000, which is based on our target pref to common shares discount of 25%, derived from averaging: 1) the pref discount of the 2-factor model and 2) the average preference share discount to common shares during the past 1 month. We are Buy rated on both the common and preference shares.
Samsung Electronics	005935.KS	Buy	Giuni Lee	KRW	212,500	360,000	69.4%	"
Samsung Electro-Mechanics	009150.KS	Buy	Giuni Lee	KRW	1,828,000	2,600,000	42.2%	We are Buy rated on Samsung Electro-Mechanics with a SOTP-based (2027E-2028E EV/EBITDA driven) 12-month TP of W2,600,000.
TSMC	2330.TW	Buy	Evelyn Yu/ James Schneider	TWD	2,460.00	3,000.00	22.0%	We have a 12m TP of NT$3,000, which is derived by applying a target P/E multiple of 22x to our 2027E EPS. Our 22x target P/E is benchmarked against 1.0stdv above its 5-year trading average. For the ADR (TSM), we have a 12m TP of US$600, based on a USD/TWD rate of 30.0 and an ADR premium of 20%.
TSMC	TSM	Buy	Evelyn Yu/ James Schneider	USD	451.79	600.00	32.8%	"
MediaTek	2454.TW	Buy	Evelyn Yu/ James Schneider	TWD	4,125.00	6,800.00	64.8%	Our 12m TP of NT$6,800 is based on a target P/E multiple of 25x (1.8 stdv above its 5-year trading average) applied to our 2H27E-1H28E EPS.
Aspeed	5274.TWO	Buy	Evelyn Yu	TWD	14,790.91	20,000.00	35.2%	Our 12-month TP of NT$22,000 is based on a target P/E of 40x (in line with its 10-year historical trading average) applied to our 2028E EPS, and discounted back to 2027E at 13.6% CoE. Our key assumptions for CoE include: (1) 1.5x beta (sourcing Bloomberg), (2) a 4.25% risk-free rate, and (3) a market risk premium at 6.25% (in line with GS house view).
EMC	2383.TW	Buy	Chao Wang	TWD	5,475.00	6,000.00	9.6%	Our target price is based on 27x 2027E P/E, which is in line with the peak P/E multiple for AI component suppliers in the past 3 years.
TUC	6274.TWO	Buy	Chao Wang	TWD	1,630.00	1,888.00	15.8%	Our target price is based on a 22x 2027E P/E, which is +2x STDV higher than the past 3-year industry average P/E multiple.
NYPCB	8046.TW	Buy*	Chao Wang	TWD	1,075.00	1,115.00	3.7%	Our target price is based on 2027 P/E of 21x, which is 1.5x STDV above the past upcycle average P/E of 13.3x.
Delta Electronics	2308.TW	Buy	Chao Wang	TWD	1,995.00	4,500.00	125.6%	Our target price is based on a target P/E multiple of 26.5x (1.6x s.d. higher than Delta's past 15-year average valuation) applied to our 2028E EPS and discounted back to 2027 at a CoE of 11%.
Yageo Corp.	2327.TW	Buy	Chao Wang	TWD	1,005.00	1,490.00	48.3%	Our 12m TP of NT$1,490 is based on a 26x average 2028E PB/ROE (in-line with the peak valuation historically and is in-line with JP peers' average 2027/28E PB/ROE).
Hon Hai	2317.TW	Buy*	Allen Chang	TWD	242.00	400.00	65.3%	Our 12-month target price of NT$400 is based on a 18.9x 2027E P/E multiple, which is set in line with peers' PEG&M ratio (i.e., P/E vs. forward-year earnings growth and OPM).
Wiwynn	6669.TW	Buy	Allen Chang	TWD	5,035.00	7,147.00	41.9%	Our target price is based on 15.8x 2027E P/E, which is derived from PC/server peers' EPS growth vs. P/E multiple correlation.
NAURA	002371.SZ	Buy	Allen Chang	CNY	803.60	1,200.00	49.3%	We are Buy-rated on NAURA with a 12-month target price of Rmb1,200, which is based on 56x 2030E discounted P/E (discounted back to 2027E). Our target P/E is derived from correlation between peers P/E to the sum of NI YoY and OPM.
Hua Hong	1347.HK	Buy	Allen Chang	HKD	178.00	333.00	87.1%	Our 12-month target price of HK$333.0 is based on a 92x 2030E P/E, discounted back to 2027E at a COE of 9.3%. Our target multiple is derived from global semiconductor peers' P/E vs. earnings growth correlation.
Foxconn Industrial Internet	601138.SS	Buy	Verena Jeng	CNY	63.59	107.20	68.6%	Our 12M target price of Rmb107.2 is based on a 23x 2027E P/E. Our target P/E is set in line with peers' regression of P/E and forward year fundamentals (NI YoY and OPM).
NEC	6701.T	Buy	Chikai Tanaka, CFA	JPY	4,347	5,190	19.4%	Our target P/E is derived from (1) a P/E of c.21-22X for the IT services business, which is a 20% premium to the average of 18.0X for the IT services sector, and (2) a P/E of c.20X for the hardware business, which is the sector average for major electronics companies. We then take a weighted average of these two multiples, based on the company's sales weightings, with a 90% weighting for IT services and a 10% weighting for hardware. We apply a premium to the average for the IT services sector because we look for profit growth above the sector average over the medium term, driven by growing demand for backbone systems and margin improvement from tackling low-margin projects, as well as structural expansion in defense business.
Fujitsu	6702.T	Buy	Chikai Tanaka, CFA	JPY	3,349	4,330	29.3%	Our target P/E is derived from (1) a P/E of c.21-22X (20% premium to the sector-average P/E of 18.0X) for the IT services business, and (2) a P/E of 20.0X for the hardware business (average for the hardware sector). We then take a weighted average of these two multiples, based on the company's profit weightings, with an 80% weighting for IT services and a 20% weighting for hardware. The reasons we apply a premium to the sector average P/E are (1) a medium-term profit growth rate that significantly exceeds the sector average, (2) an aggressive shareholder return policy, (3) the company's favorable positioning to benefit from generative AI, including in generative AI-powered system development and AI solutions, and (4) growth stories not seen at other SIers, such as the company's defense business
Nomura Research Institute	4307.T	Buy	Chikai Tanaka, CFA	JPY	5,087	5,600	10.1%	Our target is based on our FY3/28E EPS of ¥250 and a target P/E of 22.5X (derived from the historical 3-year P/E range and a premium to the sector average of 18.0X). We apply a premium to the sector average because of the company's earnings stability and profitability among system integrators, its technical edge in shared-use platforms, its ease of hiring engineers due to high salary levels, and it being well-positioned to benefit from generative AI (high progress rate in generative AI-driven development).
Baycurrent	6532.T	Buy	Chikai Tanaka, CFA	JPY	6,814	8,100	18.9%	We apply a target P/E multiple of 20x (a c.15% premium to the IT services sector average of 17.0x) to our FY2/28 EPS forecast of c.¥409. The rationale for assigning a premium to the IT services sector average is that, given the growth potential of the consulting market and the company's strong hiring capabilities, we expect profit growth to exceed the sector average over the medium term. We forecast a compound annual growth rate (CAGR) in operating profit of +25% over the next three years, significantly above the sector average (7–8%).
Recruit Holdings	6098.T	Buy	Minami Munakata	JPY	11,895	13,000	9.3%	Our 12-month target price is based on SOTP, using FY3/28E as a base year. We assume 13.7x/11.1x/4.9x target EV/EBITDA multiples for the HR Technology/Marketing Matching Technology/Global Staffing segments.
Capcom	9697.T	Buy	Minami Munakata	JPY	3,299	4,200	27.3%	Our 12-month target price is based on FY3/28E EV/NOPAT. Our target EV/NOPAT multiple of 21.3X is a 25% premium to the FY27 median of 17.0X for the global games sector.
Sony Group	6758.T	Buy	Minami Munakata	JPY	3,422	4,100	19.8%	Our 12-month target price is based on an EV/EBITDA driven sum-of-the-parts (SOTP) valuation. Our base year for the valuation is FY3/29E.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	60%	45%

As of April 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,074 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: https://www.goldmansachs.com/worldwide/india/research-analyst. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or

policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or contatogoldmanbrasil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all

research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
